

- 1 Speed control
- 2 Pressure control
- 3 Pressure relief by-pass valve

The add up feature of the pressure relief valve, design to help when the engine on the sprayer need to turn off and restart.

By opening the valve, hydraulic fluid pressure will by-pass to the oil filter base, and will prevent beck pressure from the system when needed to turn Off or On the engine.

The position shown, the valve is open to by-pass fluid flow.
